

# LADYBUG LISTENERS

The Braille cell is comprised of 6 dots. When we're talking about a letter or number in Braille, we'll discuss which dots are correlated to create it.

## BRAILLE CELL

For numbers, a number sign needs to be placed before the number's symbol. This is so the number is not confused for a letter.

**Example:**

D = Dots 1, 4, & 5

N = Dots 1, 3, 4, & 5
